SMS Notify

The **SMS Notify** sub-tab is where users define the alarm signal types the system will notify contacts of via an SMS message (Figure 1). Please note that these messages are only sent to those contacts who have agreed to receive automated SMS messages. For more information on sending SMS opt in messages to contacts, see the documentation available [here](#).

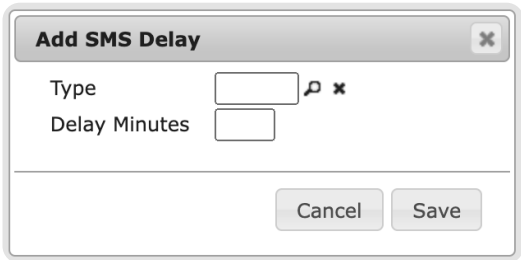

(Figure 1)

Users can interact with the SMS Notify tab via the available toolbar options. These options are defined below.

Option	Function
Add	Allows users to assign new parameters to SMS notify messages. More information on adding these parameters can be found below.
Edit	Allows users to update existing SMS notify types as necessary.
Delete	Removes the selected alarm type from the table. Once deleted, the system will cease sending notifications on that type.
Reload	Refreshes the table to display up-to-date information.

Add

Selecting Add from the toolbar will display the **Add SMS Delay** dialog box (Figure 2).

(Figure 2)

Perform the following steps to create a new SMS Notify.

1. Input the desired alarm signal the system should notify on into the **Type** field.
 - Users can also select the magnifying glass to search for and select an alarm type.
2. Input the number of minutes the system should wait before notifying contacts into the **Delay Minutes** field.
3. Select **Save** to complete creating the SMS Notify.
4. Repeat the above steps as necessary for all alarm types the system should notify contacts about.

Once all options are configured as necessary, users can select the **Save All** option to complete assigning the settings to the subscriber.
